

EDUCATION

Touro University, Queens, NY

Bachelor of Science in Computer Science

Expected January 2027

- GPA: 3.97
- Recipient of the Executive Presidential Scholarship for academic achievement
- Completed Coursera courses in web development and machine learning outside of coursework

Washington University, St. Louis, MO

Coursework in computer science and mathematics

August 2024 – May 2025

- Langsdorf Scholar Recipient (November 2022) — 1 of 15 recipients merit scholarship
- Dean's List

COMPUTER SCIENCE EXPERIENCE

CloudResearch, Software Engineering Intern (ML Red Team)

June 2026 – August 2026

- Co-built **Talos**, a self-healing optimization harness (Python, hexagonal ports-and-adapters architecture) that autonomously hardens a survey bot against a machine-learning bot detector: it drives the bot through any given survey, scores each run through the detector's API, and closes a feedback loop that tunes configuration knobs with design-of-experiments optimizers guided by a learned knob. It automatically decides what knob or code changes to make based on algorithms like SPSA and Anthropic API calls.
- Built the input layer for the team's human-mimicking survey bot that Talos tunes—going through the Chrome DevTools Protocol and using Playwright/patchright and pynput, as well as mimicked human behavior (cubic-Bézier cursor paths, overshoot, keystroke timing and adjacent-key typos). The bot, which Talos optimized, passed the company's detection system.
- Created feature that given a pre-existing human-passing bot, generates many distinct bots, some that will pass as humans and others designed to be flagged as bots, and can go through a survey.

Research Laboratory at WashU

July 2025 – October 2025

- Served as research assistant to Professor Wexler, porting functions from GPU to CPU usage
- Tested and analyzed the implementation's runtime improvements

Research Project

July 2021 – August 2021

- Assisted WashU graduate school Professor Vorobeychik and built a model that simulates developments of political leanings among masses of people in a recursive information-sharing system between simulated agents

PROJECTS

Transition Person Face to Dog

July 2025

- Created website that transforms human faces into dog faces using <https://shaggydog-bs18.onrender.com/>

Mathematics Videos

October 2021 – May 2022

- Created 350 mathematics videos on YouTube: <https://www.youtube.com/@mathvideos6394>

EXTRACURRICULAR ACTIVITIES & LEADERSHIP

Touro University Coding Club (Co-Captain)

September 2025 – Present

- Lead DSA problem-solving sessions with club members

Touro Student Government Organization, Student Representative

October 2025 – Present

- Serve as liaison between college administration and student body and help organize events

Institute of Electrical and Electronics Engineers (IEEE)

September 2024 – January 2025

- Repaired electrical hardware including wiring and soldering of over 20 boards for a synchronized light show

Keren HaTzadik (501(c)(3) charity)

May 2020 – May 2022

- Head of Database. Recorded all monetary transactions and managed database of over \$100,000 annually

TECHNICAL SKILLS

- Java, Python, C, C++, Julia, R, Prolog, HTML, CSS, JavaScript, NodeJS, MongoDB, ReactJS, Git/GitHub, NumPy, Scikit-learn, RESTful APIs, Playwright/patchright, Chrome DevTools Protocol (CDP), Hebrew (advanced), Agile, SQL,
